

# OSHA FALL PROTECTION SAFETY TRAINING

## LIVE WEBCAST FEB 7<sup>TH</sup> 2018

**Applicability** OSHA requires this training for all employees who have the potential to be exposed to the hazards of falling from any elevated surface. This training is specifically designed for mechanical, maintenance, and construction employees who have the responsibility of working safely at various elevations on the jobsite. This training program covers the critical training and safety elements for **both** Construction (1926.503) and General Industry (1910.66).

### Who Should Attend?

This training program is specifically designed for employees who need to know the critical safety elements associated with working at heights. Anyone in your organization who has the potential to face the hazard of falling from an elevated surface needs to attend this training.
