

OSHA Combustible Dust Compliance Update

FEB 15th 2019

Join us for this intensive 1-hour live webcast as our combustible dust team updates you on the latest OSHA compliance trends, changes in the new NFPA standards, and the key elements necessary to address the potential combustible dust requirements at your company, including:

- **OSHA Compliance** - An update on the OSHA National Emphasis Program (NEP) for combustible dust and typical enforcement actions happening across the United States.
- **NFPA Code Clarification** - An overview of the various NFPA codes (NFPA 652, 654, 69 and 484) and how OSHA utilizes them during site inspections.
- **NFPA 652 has been revised for 2019!** We will introduce the key changes!
- **Dust Hazard Assessment (DHA)** - What is it? What does OSHA require? Why am I required to include an assessment of our electrical hazard classifications? How often is the DHA required to be certified by a competent professional?
- **Common Pitfalls** - We will review the most common mistakes employers make when implementing a combustible dust safety plan.

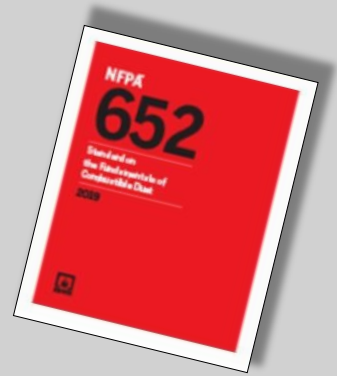

FAQ

- ✓ What typically triggers an OSHA combustible dust **inspection**?
- ✓ Is **training** required for my employees?
- ✓ What kind of **testing** am I required to do to determine if my dusts are combustible or not?
- ✓ Can we avoid the need to have a Combustible Dust Program if we implement an effective **house-keeping** program?
- ✓ We have a **dust collection** system. Does that automatically require us to have a combustible dust program?
- ✓ **These are examples of the dozens of FAQs that will be addressed during this webcast!**

NFPA 652 states that:

“as little as 1/32 of an inch of accumulated dust (comparable to the thickness of a dime) can trigger an explosion.”

Chemical Safety Board - May 2018
