

OSHA + NFPA 70E (2018)

Qualified-Level Arc Flash Safety Training

Live Webcast Training – FEB 8th 2018

Applicability OSHA and NFPA require this training for all employees who have the potential to be exposed to live conductors of 50V or greater as part of their anticipated work.

Who Should Attend?

This training is specifically designed for mechanical and service employees who have the responsibility of doing electrical tasks such as troubleshooting, electrical maintenance, voltage

testing, fuse testing, verifying a zero energy state, infrared imaging, etc. It is also designed for those employees who manage or supervise electrical workers and safety/engineering professionals who have the responsibility of managing the company's Electrical Safe Work Practices program.

Content In addition to satisfying the training requirements of OSHA's Electrical Safe Work Practices and Arc Flash Safety training, this program is designed to be a presentation which will forever change the way your employees approach electrical tasks. Arc flash accident case studies bring a real-world perspective to the hazards associated with common electrical tasks. Trainees will also be provided with the key changes to the 2018 version of NFPA 70E.

Date and Times (two sessions to choose from!)

FEB 8th 7:00 AM – 9:00 AM (Eastern)

FEB 8th 10:00 AM – Noon (Eastern)

“The only thing I can say is this training was the most impressive arc flash training I have ever attended - very informative and right to the point. Thank you!”

Jeff Klein – Maintenance Manager, Bransen LLC

Trainee Take-Aways

- ▲ World-class training from instructors who have a reputation of delivering common-sense, impactful training to electrical and maintenance employees across the United States.
- ▲ The most up-to-date, current training information including the key changes to the 2018 version.
- ▲ Review of arc flash accident case studies which provide real-world examples of why electrical and arc flash safety training, as well as the proper PPE, is so critical.
- ▲ Discussion of ‘Best Practices’ being utilized by companies across the United States.
- ▲ Review of the key OSHA enforcement targets being focused on during workplace inspections.
- ▲ Personalized safety training certificates which can be provided to OSHA to demonstrate compliance with this training standard.
