

OSHA + NFPA 70E (2018)

Qualified-Level

Arc Flash Safety Training

MCAA

MARCH 15th 2018 Webcast

MSCA

Applicability OSHA and NFPA require this training for all employees who have the potential to be exposed to live conductors of 50V or greater as part of their anticipated work.

Who Should Attend?

This training is specifically designed for mechanical and service employees who have the responsibility of doing electrical tasks such as HVAC work, electrical maintenance,

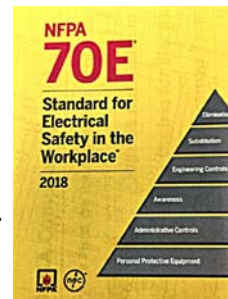

troubleshooting, voltage testing, fuse testing, verifying a zero energy state, infrared imaging, etc. It is also designed for those employees who manage or supervise electrical workers and safety/engineering professionals who have the responsibility of managing the company's Electrical Safe Work Practices program.

Content In addition to meeting the training requirements of OSHA's Electrical Safe Work Practices and Arc Flash Safety training, this program is designed to be a presentation which will forever change the way your employees approach electrical tasks. Arc flash accident case studies bring a real-world perspective to the hazards associated with common electrical tasks. Trainees will also be provided with the key changes to the **2018 version** of NFPA 70E.

Dates and Times

MAR 15th 7:00 AM – 9:00 AM (Eastern)

MAR 15th 10:00 AM – 12:00 Noon (Eastern)

“The only thing I can say is this training was very informative and right to the point. I think this should be mandatory for every HVAC technician from the Apprentice to a technician like me with over 40 years of experience.”

Robert Castle – Field Operations Manager, Bruner Corp.

Trainee Take-Aways

- ▲ World-class training from instructors who have a reputation of delivering common-sense, impactful training to mechanical contractors across the United States.
- ▲ The most up-to-date, current training information including the key changes to the 2018 NFPA 70E standard.
- ▲ Review of arc flash accident case studies which provide real-world examples of why electrical and arc flash safety training, as well as the proper PPE, is so critical.
- ▲ Discussion of ‘Best Practices’ being utilized by MCAA member companies across the country.
- ▲ Review of the key OSHA enforcement targets being focused on during job site inspections.
- ▲ Personalized safety training certificates which can be provided to both OSHA and to customers to demonstrate compliance with this training standard.
